

Top 25 Types of RAG

Baseline RAG

Retrieves and fuses relevant documents into generated outputs for context-rich answers.

Conversational RAG

Maintains dialogue memory, ensuring coherent multi-turn responses.

Hybrid RAG

Combines keyword-based and semantic search for broader coverage.

Sparse RAG

Focuses only on the most relevant, minimal chunks to reduce noise and latency.

Adaptive RAG

Dynamically adjusts retrieval depth and scope depending on query complexity.

Memory-Augmented RAG

Uses persistent memory to recall prior information and improve long-term coherence.

Context-Aware RAG

Incorporates user intent, environment, or metadata to tailor retrieval results.

Long-Context RAG

Designed to process and reason over lengthy or multi-document contexts.

Self-RAG

References previous model outputs to ensure continuity across sessions.

Hierarchical RAG

Structures retrieval layers from general to detailed knowledge for precision.

Core & Foundational RAG Types

Multimodal RAG

Combines text, image, and audio data to produce richer contextual responses.

Fusion RAG

Merges results from different retrievers (e.g., dense + sparse) into a unified answer.

Multi-Hop RAG

Chains multiple retrieval steps to connect and reason across related documents.

Federated RAG

Pulls information from distributed APIs or datasets without centralizing the data.

Chain-of-Retrieval (CoR)

Sequentially refines retrieval results in multiple passes, each improving context.

RL-RAG (Reinforcement Learning RAG)

Learns optimal retrieval strategies through reward-based tuning.

Corrective RAG (CRAG)

Embeds verified sources directly in responses for factual transparency.

REFEED RAG (Retrieval Feedback RAG)

Reformats retrieved data into structured prompts for more grounded outputs.

Speculative RAG

Predicts future queries and preloads relevant documents in anticipation.

Context-Ranking RAG

Ranks retrieved results by contextual importance before generation.

Multi-Source & Multi-Modal RAG

Learn how RAG systems, governance frameworks, and ISO 42001 principles intersect to build trustable AI.

🔗 Visit TechJacksSolutions.com to download templates and explore AI governance resources.

Reasoning RAG

Integrates reasoning chains or logic modules with retrieved evidence.

Citation-Aware RAG

Embeds verified sources directly in responses for factual transparency.

Prompt-Augmented RAG

Reformats retrieved data into structured prompts for more grounded outputs.

Few-Shot RAG

Incorporates sample examples from memory to align generation with user intent.

Agentic RAG

Allows autonomous agents to plan, retrieve, and synthesize information based on goals.

Reasoning, Citing & Prompt-Augmented RAG

Learning & Feedback-Driven RAG
